Tighten Your Network with Network Security Services

Keeping your network secure can be much like a day on the golf course. Sure, watching and protecting your infrastructure isn't nearly as fun as hitting 18 holes of golf, but the idea behind maintaining your game can be easily compared. It's fun to make comparisons with enjoyable things, so let's take a look at how a day on the greens relates to utilizing network security services.

//

...while we handle the majority of your security needs, there are things you can do proactively on your end that will help you reach the top, especially when it comes to staying compliant.

//

Proper Guidance is Crucial

No great player ever reached the top without a helping hand. They had to be observed and educated to best refine their approach before being able to reach the apex of their game. Eventually, each great player was able to achieve their best stroke and strategy, thanks to the help and guidance of the masters.

It's exactly the same with your network security; while we handle the majority of your security needs, there are things you can do proactively on your end that will help you reach the top, especially when it comes to staying compliant. We will show you what you can do to ensure absolute security and how to avoid the rough spots along the way. Soon, your network security game will be outswinging your competition to the likes of Jordan Spieth.

Watch Out for Hazards

No one likes to hear the telltale “splash!” sound on the golf course. Both water hazards and sand traps are always present in the game of golf. In the game of network security, there are always hazards and traps you can fall into which can set your network security game back a few strokes.

DMS will teach you some of the things to look out for, and the best way to avoid those hazards and traps – such as phishing attempts and URL integrity. Our goal is to train you to have a master’s eye – so you and your co-workers can spot these hazards a mile away, plotting a course around them before they have a chance to do any damage. Jack Nicklaus would be proud.

Let Us Take the Hard Shots For You

If you’ve hit the links more than once, you know some courses are harder than others. That’s actually a bit of an understatement; some courses are much harder than others. Some holes are situated on little islands accessible only by bridge or boat. Some are uncomfortably close to an active volcano. Even to the experienced golfer, the difficulties are immediately obvious.

Fortunately, one great aspect about our network security services is that we will take all the most difficult shots for you. We’re used to the “best of the best” trying to breach the defenses we have built, and ensuring they stay out. We’ll scramble the course together and increase our scores as a team. We will monitor every aspect of your network to make certain nothing damages your workflow. We will also take measures to ensure non-compliance does not hinder your handicap. When our network security services are safeguarding your data, you can relax, be productive, and enjoy a nice, cool Arnold Palmer.

“

When our network security services are safeguarding your data, you can relax and be productive.

”

DMS Technology is Ready to Hit the Links with You.

A round of golf sounds like a good deal of fun, and we'd be happy to hit the links with you. While we're at it, let's discuss your network security needs. Many a great day of business has been spent on the golf course. Give us a call and let us know when you're ready to take to the greens. We'll meet you there and find out everything we need to know to get you headed toward the game we know your business can achieve.
